VMware Workstation Pro 15.0. Workstation Pro is designed for use with personal computers running on a Windows-based operating system (Windows, Windows Server, or Windows Server Core). You can get it by paying \$140 for a new vPro license, or alternatively you can buy a key through one of the official VMware resellers (AUS\$15 or \$55 respectively). You can also find online retailers of course, but you'll need to provide your details to the resellers and usually they'll contact you for shipping etc. Q: How do you run a schedule on php console? I would like to run a schedule (to do list) on a php console. Is there any package for doing this? A: There is no built in function for this. However if you're running your own server you can either use cron or use the php.ini and edit it to look something like this: cron.php \$file = fopen("cron.txt", "a+");

```
file_put_contents('cron.txt', date("l jS, Y H:i:s"), FILE_APPEND); fclose($file);
```
